

Given the impact of having 5G, smart phones, & Web 3 as the on-ramp to digital world on BOSS MODE for anyone who doesn't have to uproot existing infrastructure, what can we do to be good stewards of a new wave of tech adoption that will redefine what lagging, pioneering, & assimilating means?

What can we, the global citizens of planet (e)Earth, come to collective truce around so the inevitable digitization of the world we live in doesn't burden the next generation with geopolitical, cultural, and humanitarian fragmentations that could have been avoided with stable step function jumps for developing states; non-rivalry stages of maintainable for lock-step upgrades/improvements/ reviews that are sequenced & prioritized for macro-zero-sum-cost on growth; & mandatory expiration dates placed on common utility services and products that squat the conscious of founders, inheritors, & progress?

How might we usher in a new era of American prosperity, revival, & integration that is tastefully built, designed, & collaged by municipal level civilians & funding while being held to federal & international usability, instrumentation, & interoperability? (Ensuring little regret for the cultural knots of tomorrow. Prepare for worst?)

How might we leverage a troubling period of humanity that is unique, transient, and hopefully accelerated in expiry but otherwise a "black swan" freak of proportions that would best be defeated if we can re-use & repurpose the scoping, planning, & resourcing to also conduct ambient forecasts for mental health, individual fulfillment in national interests, and communal stability as we aim to be more fluid in where we're are but firm on where our values/sunk-cost/"home" won't.

I believe the inwards nature of globalism that we are observing these days is a positive sign that we're having the right reaction to the dilution of what we knew to be "our way". I wish for the next generation to laugh at the idea of borders but to do so in their own palatable verbiage: jaja or hehe or haha or lol or whatever they won't be able to smash anymore....

The global reserve currency that brought you democratic freedom with MPH, Apache, & Jim and Pam's honeymoon in Paris. It's called leadership with influence, not authority. "turns head up towards a ceiling"

Immigration. I am really looking forward to practicing my civic liberties at the same equal weight as the next poli. sci. whiz telling me there's no such thing as an immigrant that's got more love for "all dat money" than me. If you care, just win with the same system and that's good enough I hope...Until then, I hope you and I can earn some love from our friends who don't know how scary it is to take risk as an entrepreneur if you don't have a citizenship. Yes I know you can technically invest and start a biz to get a Green Card but I would love to see more that can open doors up

My life started when I was 10 for me and America gave me a chance to chase dreams as I've been here since 4th grade with you here. I ball now, spit bars, & definitely look forward to be grilling the July 4th party again like we did in 2017. Yeah, I make time to be cultured you snoozers! Get your hustle up. Don't even get me started on the whole "giving a life is harder than taking one" thing. What do you know....I think aiming for #2 African born American Entrepreneur of the year might be a good shot...

These are not my friends. Please ensure you don't do all the things I do or you might wonder why I can't grill nor sell cake anymore on Cash

As the local & unique policy decisions for big markets begin to make market moving plays, how can consumers ensure not to fall into non-corrupt insider trading as a result of asymmetric information in:

## 2. Infrastructure

## 3. USD

What does it mean for sleep & work to be expected to take 8 hours - each?

What do we do with the other 8 hours in the day once the sleep & work stages have run their course?

Does everyone work an 8 hour week if they share skill level, transferable experience, & measurable outcomes within 15 to 90 days?

What might the end of the day look like if I had already showed up?

What is a measurable outcome I can induce for myself today that I can introduce for me and at least 1 person that can show observable evidence of living changed in 3 days?

How might thinking about skill acquisition about simply establishing the onset of the habit impact how said 3 of 21 days would setup the other 18 days?

What would it look like if we took breaks after every 3 days?

21 days of habit building & 7 cyclical days of breaks as padding too.

28 days in total and definitely within the range of the possible lowest # of days in a month

If globalization created time zones...Let's try again...If globalization requires us to adapt to time zones, what can we objectively observe, align, & scout as possible opportunities for collaboration in close-to real time; inverse day and night time; and alternating between the large blocks of our day?

If it helps: I am Ethiopian but I imagine I would get an audit too if I decided to go to college. I am an entrepreneur w/ desires to build world class organizations that can attract the best & most impactful talent. Now, would the FBI want to know my relationships with the C.S. Department and probably give me some run downs on what examples of moving too fast would look like...Okay maybe not the last part. You have to figure that out yourself. Generally, if you're building genuine connections and there's a pretty clear and obvious lineage to your collaboration, reasonable in influence relative to your contributions to the institution, and degree of fidelity that - if at all - binds your relationship in deviations of what the reasonable student might expect to reach within similar time, constraints, & opportunities. (Forgive me if I sound tone deaf...this is hard and I'm not trying to be here too long)

As Covid off ramp begins to confront academia staff & researchers with sudden realities of what will now become an increasingly hostile tensions between FBI/Intelligence/ Washington and increasingly more distributed and diverse research staff; jurisdiction & attribution that will be evermore digital yet blurred in borders; and non-homogenous of a reality that Chinese, Russian, & other-sanctioned states wouldn't be the only recipients of...
